

# CHEM 210 Modern Applications of Chemical Principles – Lab

## TA Evaluation – Ellie Zheng

**Use the space below to provide your TA with feedback about his or / her strengths in teaching the laboratory.**

She really cares about her students and is always there to answer questions.

I believe that clarifying expectations for presentations and discussions would make the class more fair.

Ellie was absolutely fantastic. Her greatest strength was her willingness to help. I never felt uncomfortable when I did not understand a certain procedure or a chemistry concept. Ellie always answered my questions clearly and that greatly helped my lab experience.

Ellie was always knowledgeable and understanding!

Ellie was so great! She was very responsive to e-mails and very helpful.

Ellie is fantastic!! She is probably one of the best TAs I've ever had at Duke. She conducts the lab in a very relaxed and enjoyable manner.

You were very supportive and always helped us when we had problems understanding what to do in the lab. You were very knowledgeable in chemistry.

Very kind and approachable -- limited confusion during the lab

Ellie is a great TA. She always tries to answer questions during lab, which is really helpful. Because the rooms are so loud it is sometimes hard to hear her, but she definitely knows the material and is very prepared for lab.

Very helpful, knowledgeable, and prepared for lab

**Use the space below to provide suggestions about how your TA might improve his or her teaching.**

You have been, by far, the best TA that I have encountered in any of my chemistry labs here at Duke. Thank you so much for a great semester, Ellie!

I think Ellie can do a better job at explaining her requirements. I often saw that she marked down on aspects of my assignment that I didn't understand.

Speak more loudly and confidently.

I do not have any suggestions for how Ellie can improve. She was great.

N/A

If I were you I really wouldn't change anything about your teaching. Good job!

Graded quite difficultly (took off points for small errors)

Sometimes I would send her an email on a Friday or Saturday because I had Monday lab, and she might get back late on Sunday. I can't ask her to improve this, however, because it is the weekend and the TAs shouldn't have to check their emails just for lab questions during this time off.

Be a little more assertive
